

Page 1

First page of the mixed fixture. The next page will be intentionally blank. We use this to confirm that the parser records the skipped page and continues with the remaining text. Skipped pages show up in the import summary and as a typed ProjectWarning.

Page 3

Third page continues after the blank. The parser should keep page ordering. Each scene's page number matches the original PDF page number, not the scene index. This matters for the manual QA outputs.

Page 4

Fourth page closes the mixed fixture. If you re-import this PDF the same scene set is produced.
