

Page 1

Welcome to the sample document. This first page introduces the project. We will explore three pages of selectable text. Each page becomes one scene in the video. The narration script is the first three sentences extracted from the page.

Page 2

Page two covers the architecture. The renderer uses FFmpeg with the drawtext filter for captions. When the drawtext font is missing the export falls back to text-less video and a typed warning is recorded. Translation providers can swap source scripts for translated scripts.

Page 3

The third page wraps up. Each scene has a thumbnail, a duration, and a script. You can edit any of these in the inspector before exporting. Export produces a YouTube 1920 by 1080 video and a TikTok 1080 by 1920 video from the same scenes.
